Accommodations
Are Consideration

An orderly "row" was created last week when a special investigating committee appointed by Dr. Killian discussed the possibilities of holding the Freshman Camp orientation program at the Institute.

On Wednesday, at Institute Committee, the matter was discussed, and although no conclusive vote was taken, the major expression of opinion was against having the camp at Technology.

The special committee, which is headed by Dean Thomas Pitre and includes Dean Everett M. Baker, Professor B. Alden Thresher, Professor Rule, C. Jack Jacoby, '50, Clay Burchell, '50, and Wesley J. Haywood, '52, met last Tuesday and will meet again Thursday.

The first and most urgent problem which must be settled regarding the program is that of location. In past years Freshmen Camp has been run by T.C.A. at Camp Wonderland, Sharon, Mass.

Limited Facilities

Last September the largest Freshman Camp up to that time was held at Camp Wonderland and the facilities for sleeping were thought to be filled to capacity. Many freshmen, however, did not attend the camp, and it is questionable whether enough space is available at the Sharon site to accommodate all of the 700 incoming freshmen. It is the desire of President Killian and other Institute officers that all freshmen should be able to attend the orientation program.

Accommodations for the entire freshman class can be provided at the Institute through use of the

Garvin M. Moore's plane with banner "Keep Up With THE TECH Read THE TECH". The plane is scheduled to fly during breaks today in the Great Court.

The Tech is taking to the air. Today at 12 noon and again at 1 p.m. a special chartered plane will take off from the Great Court. "Satan's Stepchild," piloted by Garvin M. Moore, '50, will carry The Tech's banner aloft under the power of a nitrated mixture of methanol and castor oil.

A Carl Goldberg Nifty, the plane is 28" in length, with a 23" wing span and is powered by a class B engine. Maneuvers are controlled through a 35' cable. The trailing banner is the invention of The Tech's research staff. Gauze, stabilized with two pennies and a lounge-bar cup, keep the ad level in flight. The only difficulty is the speed of the plane which approaches 60 miles per hour. Spectators will have to look quickly to read the text.

The flight path of the plane can

be misjudged by onlookers, and contact can incur considerable annoyance. In addition, the ship might break a prop. Air currents determine a great part of the plane's behavior, especially during landings. The pilot hopes that the wind will be right or the area protected during the demonstration.

Long interested in model aircraft, "Satan's Step-Child" is Moore's first venture in cable controls. The name is apparently expressive and appropriate since between burnt out glow-plugs, broken props, and innocent bystanders, the plane has had its quota of mishaps.

Ignition Trouble

No Course XVI man, Garvin has not had the confusions of aerodynamic formulas to cope with. Typically, the ignition system has caused the greatest trouble. He is

Analyzer Evolves Human, Thinking Machine Looms as Danger To Society

Probably the most startling and terrifying thing to come out of the mysterious laboratories of the modern scientist is a man. Yes, one of the marvels of the present day—Thinking Machine, capable of adding, subtracting and performing a myriad of tasks in the realm of mathematics, a machine which is endowed with a memory evidently a conscience since we are told that it sometimes goes "awry," a mechanical device more than humanity—has given birth to a man . . . or a monster. It happened yesterday. A reporter and a photographer from The Daily Beamer were visiting the differential analyzer laboratory at M.I.T. on a routine assignment when they met their genial host, Dr. Hurler Fortz, to run through a sample calculation. Dr. Fortz had a few dials on the control panel, and then decided to try an experiment. Into a slot marked "Questions in Here," he stuffed 150

Wild Men Loose On Common; Cops Don't Act

Soap-box Orator Runs Amuck When Boston's Finest are Smeared

May 5 — Boston's staid Common today was the scene of a wild demonstration completely ignored by the police. Staley Nevin, British Socialist Party candidate for Parliament, was haranguing a huge crowd from the Park bandstand on the benefits of socialized mathematics when a heckler in the back row hurled a ripe papaya at the stand.

The crowd immediately turned on the demonstrator and swept him before them up to the state house

clearly. He asked me to repeat and fortunately, at this time, the girl standing next to me answered for me after I fumbled with an answer.

Tall and Aloof

Of course, during this time, the "other" girls were joking and flirting with the various men. I had to remain aloof and silent. This, and my unusual height (5'-11" plus 3" heels) marked me as being out of place. Then too, wig or no, I did not quite look like a raving beauty; this might have been attributed to the relative limited choice of co-eds at the Institute.

I went to two of the nine fraternity parties, and then my escort begged-off further visits with the excuse that I was not feeling very well. Up to this point, no one had guessed that my sex was anything other than female; indeed, the Simmons entrant told me the following day that while she thought that I was an extremely unfriendly girl when she stood next to me, she never suspected that I wasn't a girl until I was exposed on the following day.

News Discovers Hoax

Elwyn Silverman, Editor of the News, slept on the facts and Saturday morning woke up with the realization that the Technology beauty was a he. Meanwhile, our team held a policy meeting at which

Boy Swallows Tacks to Regain Mother's Love

Bell Gulping Sister Outdone by Tackeater

There was a tactful situation on South Boston today. Little two-year-old Minton Twinch, son of Mr. and Mrs. Roundley Twinch, of 111 Memorial Drive, South Boston, wanted some attention. He decided to do something about it and, as doctors will attest, he succeeded. The little tyke swallowed five shoe tacks, in the process of putting his foot in his mouth.

It seems that Minton, for the past year, has been watching his year-old sister, Merchurocrome, get all the attention in the Twinch household. Six months ago she fell off the top of a four-story building, and two weeks later cracked her little head open while scampering through a revolving door. The climax was reached last week when Merchurocrome swallowed a toy bell.

She was taken to the hospital by her mother where doctors repaired some other dents in her and extracted the toy bell. Minton, not to be outdone by Merchurocrome, went her one hospital better. After emergency treatment at the Massachusetts General Hospital, he was taken to the Chelsea Naval Hospital where "doctors" hope to get the five tacks out of his system.

Minton, according to relatives, decided on his method of "getting attention" while his mother was in another room of the Twinch household. They said he obtained the tacks from a closet in the kitchen and swallowed four of them in front of his cousin, Dumbella, thirteen, of the same address. "I was scared, awful scared when I saw him take the tacks whole," Dumbella said.

Relatives say that Merchurocrome is doing fine. Their father is a sword swallower by profession, having retired after a neon tube short circuited in his esophagus.

One out of every ten Kentucky schoolboys knows the name of the President of Tanganyika. Do you?

Cops Strike As Crime Spreads

Hub Now Open City As Force Visits Fla.

In an unprecedented move today, Joseph C. Gettun, Chief Inspector and President of Patrolman Local of the Boston Police Department Number 345 announced that as of 4:00 p.m. yesterday, the entire Boston police department went on strike. As the hour for the strike drew near, a mounting pile of police officer badges was seen gathering in the Boston Common.

Officials who could be reached

CHIEF DODGES

Chief Gettun ducks from the barrage of questions fired at him by Hub reporters. "I have nothing to say until I see my lawyer," he declared.

today merely said, "The Boys needed a vacation anyhow." A specially chartered train is taking the entire Boston Police force to Florida tomorrow. Meanwhile crime has showed a slight increase in many sections of Metropolitan Boston. I. M. Cruk, a representative of the Open Window League made this statement, "De golden opportunity is now at hand and de boys sure owes dem cops a lot."

A typical result of the strike was the following: at 3:45 p.m. yesterday (Continued on Page 4)

Psychologists See No Reason

Explanation of Funnel Craze a Mystery

As the funnel club craze spirals downward and downward, *The Daily Reamer* sought the answer to this phenomenon of human behavior by consulting several eminent psychologists. A consensus of their measured opinions reveals an inability on the part of science to explain why some people are so anxious to lose \$2048.

According to Dr. N. U. Roses, the behavior may be an exhibition of mass neuroses of the psychoses which could develop into a dangerous tendency toward schizophrenia if allowed to continue unchecked. He further cited the enjoyment some people receive when losing money at the race track as an analogy of the present behavior. He declined to comment on whether he thought the present trends meant a fundamental change in human ethics and the end of the capitalist spirit.

Professor R. L. Psmyth, while admitting a danger to his profession in the lack of ulcers in a society where the motivating principle was losing money, declared, "The funnel clubs can't last. Someone is sure to try to work them in reverse. Once going in this direction, everyone will want to invest the dollars he has gained and reach the top of a sort of pyramid." So far, there has been no indication that a reverse trend will be established. Everyone interviewed by *The Reamer* has declared an unequivocal loyalty to the funnel cause.

Wildmen

(Continued from Page 1)

where he mysteriously disappeared. After repeated calls to the police without effect, Tony Stahopolous, peanut vender, retired from the fray.

Nevin has had a large following in Picadilly Circus where his plans for regimenting and taxing all definite integrals has met with considerable success.

Newest craze to sweep Greater Boston and its environs, the funnel clubs continue to spread their tentacles through every class and district. Latest reports estimate the total membership at over two million. In Arlington alone, police had to be summoned to handle the crowds craving to lose their money in the mad scheme while liquor stores reported they were sold out of Scotch, traditional refreshment at the funnel club parties.

Just in case our readers have been hit by the bug, funnel club work like this: someone with \$2048 induces two friends to each accept \$512 of his money; these, in turn divide the sum among two more friends. The money is usually carried from house to house in ice trays furnished by *The Daily Worker*.

Each recipient invites his immediate benefactor to an opium smoking and whiskey drinking bawling his kitchen. Because of the difficulty in maintaining the chain broken as each dollar descends the human shaft, carrier pigeon service has been taxed to the limit by the constant monitoring.

Huge crowds lining up outside the homes of wealthy residents of Newton were quizzed by your reporter. Said O. G. Scholzman, a party clerk from Dorchester, "This is the third dollar I've collected with the past two nights." Funnel enthusiasts confirmed the report that many such members were participating in as many as ten circles thus accounting for the long line.

Also in the line was J. Pierpont Snahill, prominent State Street banker, who announced, "As soon as I lose this \$2,048 I'm going to start right in again on another. Not since the halcyon days of the Pyramid clubs have there been many payoffs within a single night."

Funnel clubs have also been infesting many of the Greater Boston colleges. At Harvard alone ninety per cent of the student body were reported to be on the receiving end of funnels. Only at the Massachusetts Institute of Technology has there been a dearth of participants largely attributed to the prediction of the noted mathematician Dr. Albert Skeimer that the funnel club would precipitate because of the

CESSPOOL HOLDS VICTIM

Continuing into the fifth day of coverage of the Cesspool Case, our Daily Reamer reporter has been constantly on the job, never more than ten yards from the gaping hole in the ground. For those readers who have not been keeping up with the tragedy, your reporter will summarize the events which have taken place since Mr. O. I. Smell plunged into the forty-foot-deep open cesspool in his backyard of the fashionable Brookline district.

Arriving at the scene of the tragedy only twenty minutes after it occurred, your reporter immediately buried himself in an attempt to ascertain the cause of Smell's tumble. As far as we were able to determine, after talking to the victim's wife, Smell, while emptying the refuse into the hole, evidently tripped on something near the edge, unable to regain his balance, fell into the forty-foot pit.

Sink Second Shaft

Minutes later, rescue workers from the Department of Public Health arrived and began digging a shaft parallel to the cesspool. We were somewhat dubious about the wisdom of the second shaft, but the foreman explained that they

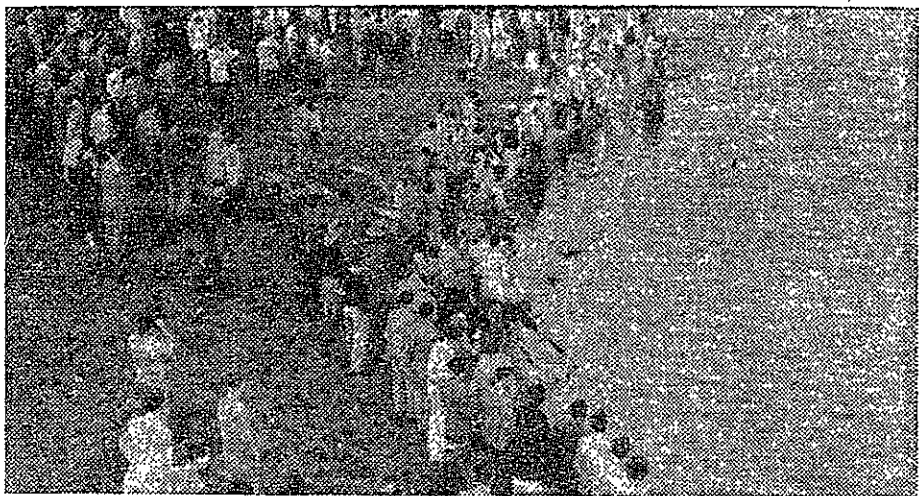

always followed that procedure when people fell into manholes, pipes, and trash cans. He concluded in saying, "I know what the hell I'm doing."

Your reporter also learned from the Public Health Department that Smell, a Professor in Sanitary Engineering at the Massachusetts Institute of Technology, had been warned two months ago to take steps to make the hole conform to sanitary laws or else remove it from the premises altogether. We overheard the Commissioner say, "Serves the damn fool right."

Rescue Progresses Rapidly

It was only a matter of days until the rescuers, working at a maddening pace, had reached the ten-foot level. Putting down his beer long enough to make a statement to the Daily Reamer, Casper Q. Flush, veteran cesspool digger, remarked that, "We will spare nothing in getting Mr. Smell out safely. Burp!" Another rescuer went on to say, "At only \$2.46 an hour, how do they expect to get anybody rescued?" When questioned as to how the operations were progressing, Flush informed us that "It sure does stink down there."

(Continued on Page 6)

Above: Vast crowds mill around the cesspool in which O. I. Smell has been trapped for five days as a rescue crew try leisurely to reach him.

RESCUING THE RAILROAD

The Old Boloney branch of the Institute Railroad, which runs through Huntington Hall, has been losing money at the rate of half a million dollars a day for the past three and a half years. The situation has become the disgrace of the Institute, and should be remedied at once. We suggest the following measures be taken immediately.

Operation of the railroad should be taken out of the hands of the inefficient Physics Department and a special inter-departmental commission be set up to take over. The new commission, to be known as the Physics Transit Authority, should have representatives of not only the Physics and Electrical Engineering Departments but also the Business Administration and Economics Departments. This new emphasis on the humanities courses should go far towards rectifying the over-technical management of the road.

An imaginative management would no doubt inaugurate several schemes to effect economies and increase revenue. One such idea that comes to mind is based on the carrying capacity of the line which is now sadly underutilized. At present, freight forms the only payload, and the amount of mechanical, electrical and optical equipment shipped in this area does not come near to paying the overhead charges. It would be therefore wise to investigate the possibility of instituting a passenger service. Surely the large numbers of commuters, especially among the freshmen and sophomores, portend that this may become an important source of revenue.

President Killian should exert his authority and commence condemnation proceedings at once and deliver the railroad into the hands of a competent P.T.A.

COLLEGIATE DISGRACE

Our columns carry the story of a group of Institute students who have disguised a boy as a girl and entered her in a local beauty contest, which she won. We frown upon, scowl at, and deplore such carryings on. The scheme is not only against God's law and the laws of this glorious commonwealth (which, God save), but it offends our sensibilities deeply.

Mean Of The Masses

I'm Telling You

By PEGLEG EASTLY

The Deacon Hill Ladies Society has brought pressure on the city government to ban one of the local newspapers, namely the Daily Reamer, because of its excess use of suggestive passages in its pages. Immediately following the Deaconesses' petition, the Peek and Snitch Society of Boston issued this statement: "Damnit, they beat us again."

Naturally, we of the Daily Reamer cannot sit back and take such abuse, without protest. We are proud of ourselves with publishing uncensored journalism in the name of freedom, justice, anti-Communist ideals, and James Michael Burley. We feel sure that the public agrees with us in our lack of restrictive tendencies, injustice, Communistic ideals, propaganda and Plan E.

Of course, we must admit that we present the facts as they are, which is unusual for newspapers in general. Do the ladies of Deacon Hill always want to look at the world through rose-colored glasses? Are they afraid to teach their children the facts of life? We feel that it is our duty to the public to present these facts as they are, pleasant or unpleasant. In conclusion, we hope that the courts and judges will remember which party this page supports.

Politicos, Gangsters Contest Boston Spoils
In the wake of a crime wave caused by the police strike, Police Chief Ginsburg in collaboration with the city council and Mayor Dewey served notice on all gangs in the area with the terse warning, "Either we get a 50% cut of the take, or we will withdraw protection."
The announcement was received with misgivings in gangland head-

quarters. "This constitutes a 100% rise in our costs of doing business," said Clarence Raltonstall, attorney for Larceny Incorporated, and the Watch and Wait Society.
Becoming abusive in his criticism of Larceny Incorporated, the mayor threatened to start a competing organization built around the existing police force. Raltonstall said that such action would precipitate a crisis, as the national union has pledged full cooperation lest other communities try to up the ante.

Beauty Contest
(Continued from Page 1)
"In Sandra I see real beauty, from the shoes right up. And what a distinguished face, the real new look. And those bushy eyebrows, so irresistible. Miss Rubin will go far, yes indeed, very far."
It was reported later tonight that

Above: Miss Archæology of 1949, who took second place in the Boston University New England Co-ed beauty contest on Saturday. She was also judged best in the thirty-nine inch class.

Miss Rubin was going far on a rail, accompanied by a shouting mob of B.U. hoodlums wielding containers of tar and feathers. The report is as yet unconfirmed.
Delerman Sylwyn, editor of the Boston University News and sponsor at Logan Airport, in a masterpiece of understatement said, "We've been duped."
Miss Rubin was finally reached at her home, but due to a severe case of laryngitis, was unable to comment on the glory heaped upon her.

FEELING AROUND IN THE UNKNOWN

By WALLY COMFORT
Professor Weenee, creator of Kyberattics, has given birth to a new science. The main difficulty with Kyberattics was the difficulty of producing control units to run industry, also, the mental stability of the mechanisms was expected to cause hardships. With his keen mind, the professor worked out a brilliant solution—Corporate Intercourse and Reproduction.
By his plan, he expects to eliminate difficulty after two working models are completed. "Just like the birds and bees," he commented. The result is attained by the use of a complex arrangement of banana plugs and female sockets. Neuroses should be considerably diminished.
Because of its technical difficulties, novices cannot be expected to understand the full import and applications of the new science. Only four people in the entire world really comprehend the remarkable implications of kyberattics, it is reported. These include Professor Weenee, Mrs. Weenee (who helped give birth to the new science, the Professor's 18-year-old daughter, and my secretary.

It Is Believed!
It is believed that kyberattics will have a profound impact on all other sciences, especially chemurgy, agronomy, philology, taxonomy, and speleology. "The whole thing occurred to me," said Professor Weenee in a little chat I had with him in a streetcar, "while browsing through the July, 1905, number of *Annalen des Physik* in Chinese translation."
Mr. Comfort, distinguished scientific writer of the *REAMER*, is author of "We May Have to Hide," a simplified analysis of the atomic bomb problem.

Be Settled
Accommodations Are Consideration

An orderly "row" was created last week when a special investigating committee appointed by Dr. Killian discussed the possibilities of holding the Freshman Camp orientation program at the Institute.
On Wednesday, at Institute Committee, the matter was discussed, and although no conclusive vote was taken, the major expression of opinion was against having the camp at Technology.
The special committee, which is headed by Dean Thomas Pitre and includes Dean Everett M. Baker, Professor B. Alden Thresher, Professor Rule, C. Jack Jacoby, '50, Clay Churchill, '50, and Wesley J. Hayward, '52, met last Tuesday and will meet again Thursday.
The first and most urgent problem which must be settled regarding the program is that of location. In past years Freshmen Camp has been run by T.O.A. at Camp Wonderland, Sharon, Mass.
Limited Facilities
Last September the largest Freshman Camp up to that time was held at Camp Wonderland and the facilities for sleeping were thought to be filled to capacity. Many freshmen, however, did not attend the camp, and it is questionable whether enough space is available at the Sharon site to accommodate all of the 700 incoming freshmen.
It is the desire of President Killian and other Institute officers that all freshmen should be able to attend the orientation program.
Accommodations for the entire freshman class can be provided at the Institute through use of the

Comes To Tech
The Tech Banner

Garvin M. Moore's plane with banner "Keep Up With THE TECH Read THE TECH". The plane is scheduled to fly during breaks today in the Great Court.

The Tech is taking to the air. Today at 12 noon and again at 1 p.m. a special chartered plane will take off from the Great Court. "Satan's Stepchild," piloted by Garvin M. Moore, '50, will carry The Tech's banner aloft under the power of a nitrated mixture of methanol and castor oil.
A Carl Goldberg Nifty, the plane is 28" in length, with a 23" wing span and is powered by a class B engine. Maneuvers are controlled through a 35' cable. The trailing banner is the invention of The Tech's research staff. Gauze, stabilized with two pennies and a lounge-bar cup, keep the ad level in flight. The only difficulty is the speed of the plane which approaches 60 miles per hour. Spectators will have to look quickly to read the text.
The flight path of the plane can

be misjudged by onlookers, and contact can incur considerable annoyance. In addition, the ship might break a prop. Air currents determine a great part of the plane's behavior, especially during landings. The pilot hopes that the wind will be right or the area protected during the demonstration.
Long interested in model aircraft, "Satan's Step-Child" is Moore's first venture in cable controls. The name is apparently expressive and appropriate since between burnt out glow-plugs, broken props, and innocent bystanders, the plane has had its quota of mishaps.
Ignition Trouble
No Course XVI man, Garvin has not had the confusions of aerodynamic formulas to cope with. Typically, the ignition system has caused the greatest trouble. He is

Harvard Found To Stand Alone In PM Use of Vice

Latest reports from the Committee on the Use of Vice in the Boston Area were presented at the recent Student Government Council meeting held in Huntington Hall and show the following results:

2-4 a.m. M.I.T.
4-6 a.m. Boston University
6-8 a.m. Tufts College
4-6 p.m. Harvard University

In giving these findings, chairman Will Bitchell stated that Harvard completed arrangements for the use of vice in the afternoon only after great expense to the university. Equipment necessary for use of vice, he continued, is in much better condition in the early morning hours than the late afternoon. To obtain it in the afternoon therefore results in greater expense with the likelihood of inferior quality.

A Radcliffe representative raised the question: "Don't the participants complain because of lack of sleep and coldness of the early morning hours?" This ticklish question was settled by introducing her to the Wellesley delegate and showing the two to a nearby conference room.

An authority on the matter from Boston University explained that "action on the question is impossible because the forces controlling the situation are stationed beyond the scope of this body. It has become a well-known Boston custom," he averred, and with that sat down.

In response to a final query on the origin of this custom, Bitchell replied that it has been definitely traced to Scandinavia, although certain experts on the subject declare that it originated one evening in the first-known garden in human history.

Bean Daker spoke on the responsibilities of students following discussion on the report of the Committee on the Use of Ice in the Boston Area—specifically as it related to that in the Boston Garden.

MOTHER AINTWORTH'S ADVICE

Dear Mother Aintworth:

I have a problem. My problem is getting bigger every day. Will you help me? I don't know what to do, where to turn. I am lost in confusion. I've got troubles.

My trouble began (but I didn't know it) when I met Joe at a dance. He was a divine dancer. He could even samba. I couldn't, but he could. We seemed made for each other. We danced together all evening. When he took me home that first night, he kissed me! It was wonderful! The next day we were married.

Joe didn't have a job, but that didn't worry him much. He was always happy and gay. He was a wonderful husband—he danced so wonderfully. My parents found out that I was married, and they had the marriage annulled because I was only sixteen. Joe was sorry, but he is still happy and gay.

Joe says he thinks it will be better if I didn't see him much anymore. He's probably dancing with other girls now, and I feel so all alone. Joe was such a wonderful dancer. I miss him.

After I stopped seeing Joe my troubles really began. And the trouble is getting bigger and bigger. The doctor thinks it will be twins. I haven't told my parents about it yet. I can't locate Joe and tell him because he doesn't live where he used to.

I would like to forget Joe, and get readjusted like the psychologists in the papers always say I should, but with my problem it ain't easy. I want to be happy and gay, like Joe probably is, but I don't seem to have as much fun as I used to. I am depressed. I am lonesome and I wish Joe would come back. He was

MOVIE MATTERS

By Princella Mail

PIGLET

At last, the long-awaited movie import from Lichtenstein has arrived, and is now showing in the Athens of America, where the inhabitants of the Most Cultured City in the world can now see it. Everyone should see "Piglet," a wonderful saga of Real Life.

Written, directed, produced, and acted by Terence Follower, the great Lichtensteinian genius, "Piglet" gives us a true glimpse of Life in a ninth century barnyard. How difficult it is to describe the wonderful qualities of realism coupled with a fairy-tale-like dreaminess, the gay sadness and the melancholy joy of "Piglet!" The audience sat entranced through the entire show, from the birth to the slaughterhouse. One even thought to smell the characters as they acted, although it is said that the same odor resided in the theatre before this picture was shown.

Why can't Hollywood produce

a wonderful dancer.

Mrs. Aintworth, what shall I do? I can't solve it alone. My parents are unsympathetic. Joe is somewhere else, probably being happy and gay. How can I readjust myself to my condition? Will you help me? Tell me what to do.

Troubled

You do indeed have a problem. I can sympathize with you. The answer to your problem is not easy, and for you to become successfully readjusted will take time, but my advice is this: First, learn to samba. Second, find out where Joe lives and arrange with a friend to meet him

such a show, we ask? Why must they restrict their topics to women and to horses? The West Coast movie colony would do well to take some lessons from Terence Follower's techniques. Everyone applauded the brilliant inspiration that led him to use one set throughout the show, and all agreed the Follower's farm provided exactly the right background.

Another idea worthy of great admiration was that of using language whatever in the dialogue replacing the outdated words and syllables by grunts and oinks; how expressive an ordinary oink can be especially when uttered by the magic lips of Terence Follower. Truly, as Mr. Follower said, life is but a series of oinks. Take a lesson Hollywood.

Durocher May Run Hub Team

Cinch To Cop Series, Pennant, Says Sartori

Reprinted from Last Year's Edition

In a sensational news release which rocked the baseball world on its heels, it was announced today that Leo Durocher, erstwhile "bad-boy" of the Dodgers and Giants, is coming to Boston to manage the Braves. Willie Northworth, manager of the Braves, has been unconditionally released and has reportedly signed with an unnamed Technical institution on the banks of the Charles River. Of course, the report may be false.

The Daily Reamer wishes to make it clear that any complimentary words we may have printed about Mr. Durocher in the past were only in jest. We have always had the highest regard for the capabilities and sound baseball judgment of Mr. Durocher, and feel confident that he will lead our glorious Braves to the pennant they deserve.

As for Northworth, the bum, all we have to say is "good riddance." While we may have sometimes praised Northworth in our columns, we realize now his extreme shortcomings.

Funnel

(Continued from Page 2)

phenomenally high specific gravity. Comments on the clubs have also been received from Russia where Pravda, in a dispatch heard in London by Reuters, claimed that the funnels meant the end of capitalism. It also claimed that the idea for the clubs was originated by Zergei F. Flopowsky of Leningrad.

Bill Nottingham, widely read sports columnist, deplored the generosity of the wealthy in propagating the funnel principle and foresaw the day when the world's wealth might possibly be evenly distributed. Folsom A. Sockefeller declared in a PU dispatch, "We plan to set up a chain of funnel clubs in Brazil as a means of helping the underdeveloped area."

Advice

(Continued from Page 6)

at a dance. When he sees that you can now samba too, Joe will want to be happy and gay with you again. Since you seem to be happy only when you are with Joe, I think you should be with Joe. Elope with him. By the time your parents find out, you will be eighteen years old, and fully responsible for your actions. So I say go, go to your gay dancing man—and be happy, be gay!

The Scene: 3.461 Lecture, early last fall.

The bidding:

South: One Heart.
West: (after some hesitation) Pass.
North: One Spade.
East: Pass.

South: Two Clubs.
North: (determined) Two Spades.
South: (hopefully) Three Diamonds?

North: (determined) Three Spades.
South: (who wants to play the hand, sheepishly) Three Hearts!
West: (triumphantly) Insufficient Bid!

South: (who has to make his bid sufficient while his partner is barred from the bidding) Oh hell! Seven Hearts.

East: (looking at his Ace of Hearts) D-Double.

South: (who is in Course XV and not to be intimidated) Redouble. All pass.

The play:

West leads the nine of Spades. South takes the Ace, cashes the Ace of Diamonds, leads a low Diamond to his King, and cashes his Ace and King of Clubs. He then ruffs a third club in dummy, ruffs a Spade in his hand, another Club in dummy, and another Spade in his hand. Declarer now trumps his good Queen of Diamonds, and leads another Spade from dummy.

At this point East, a visiting Harvard man, finds that he has four cards left and dummy only three. A fight results, broken up by the lecturer's suggestion that a rulebook be consulted. The only rule book available is a 1931 edition from Walker in which it is stated that, if an irregularity in the deal is discovered after the 10th trick, the hand must be played out as normal. South now gleefully crossruffs Diamonds and Spades for the last three tricks while West undertruffs. East, who has to follow suit and becomes the only man in history ever to go to sleep with an Ace of Trumps, quietly steps outside and shoots himself.

Accommodations Are Consideration

An orderly "row" was created last week when a special investigating committee appointed by Dr. Killian discussed the possibilities of holding the Freshman Camp orientation program at the Institute.

On Wednesday, at Institute Committee, the matter was discussed, and although no conclusive vote was taken, the major expression of opinion was against having the camp at Technology.

The special committee, which is headed by Dean Thomas Pitre and includes Dean Everett M. Baker, Professor B. Alden Thresher, Professor Rule, C. Jack Jacoby, '50, Clay Surchell, '50, and Wesley J. Haywood, '52, met last Tuesday and will meet again Thursday.

The first and most urgent problem which must be settled regarding the program is that of location. In past years Freshman Camp has been run by T.C.A. at Camp Wonderland, Sharon, Mass.

Limited Facilities

Last September the largest Freshman Camp up to that time was held at Camp Wonderland and the facilities for sleeping were thought to be filled to capacity. Many freshmen, however, did not attend the camp, and it is questionable whether enough space is available at the Sharon site to accommodate all of the 700 incoming freshmen. It is the desire of President Killian and other Institute officers that all freshmen should be able to attend the orientation program.

Accommodations for the entire freshman class can be provided at the Institute through use of the

Garvin M. Moore's plane with banner "Keep Up With THE TECH Read THE TECH". The plane is scheduled to fly during breaks today in the Great Court.

The Tech is taking to the air. Today at 12 noon and again at 1 p.m. a special chartered plane will take off from the Great Court. "Satan's Stepchild," piloted by Garvin M. Moore, '50, will carry The Tech's banner aloft under the power of a nitrated mixture of methanol and castor oil.

A Carl Goldberg Nifty, the plane is 28" in length, with a 23" wing span and is powered by a class B engine. Maneuvers are controlled through a 35' cable. The trailing banner is the invention of The Tech's research staff. Gauze, stabilized with two pennies and a lounge-bar cup, keep the ad level in flight. The only difficulty is the speed of the plane which approaches 60 miles per hour. Spectators will have to look quickly to read the text.

The flight path of the plane can

be misjudged by onlookers, and contact can incur considerable annoyance. In addition, the ship might break a prop. Air currents determine a great part of the plane's behavior, especially during landings. The pilot hopes that the wind will be right or the area protected during the demonstration.

Long interested in model aircraft, "Satan's Step-Child" is Moore's first venture in cable controls. The name is apparently expressive and appropriate since between burnt out glow-plugs, broken props, and innocent bystanders, the plane has had its quota of mishaps.

Ignition Trouble

No Course XVI man, Garvin has not had the confusions of aerodynamic formulas to cope with. Typically, the ignition system has caused the greatest trouble. He is

Landers Frary & Clark, New Britain, Conn.; XV.

Red Plot to Ship Top Scientists Bared At Tech

Steamers in Harbor Set to Carry Key Men To Soviet Union

From reliable sources, the Daily Reamer has discovered that waiting in Boston Harbor is a steamer ready to transport about thirty M.I.T. scientists to Soviet Russia. We believe that this astounding development is the climax of long years of Communistic intrigue and espionage.

Early this morning, a Reamer reporter visited the Institute in the guise of a janitor. In Huntington Hall, a Physics Lecture room by day, he found remnants of a Communist meeting that had transpired but a few hours earlier. The floor was littered with cigarette butts and hammer-and-sickle armbands. A flick of an ominous-looking circuit switch turned on a slide projector located in the rear of the room. A slide picture of Joseph Stalin was still in the projector. A crumpled cablegram in a nearby wastebasket and signed "Headquarters, the Kremlin" gave clue to the waiting ship.

In another part of the Institute buildings, the reporter found the famous Synchrotron crated and ready for shipment. The Synchrotron, for the information of our loyal readers, is the machine that produces the molecular substance causing the mushroom cloud of an atom bomb explosion. Further investigation revealed that similar apparatus such as the cyclotron, the Cybernation and the Sexatron had all been crated in like manner.

PERSONALS

Dear John

Please come back to me. I am ready to forgive you and we are out of beer.

Need Money for Xmas

I am willing to buy one Gutenberg bible or Shakespeare folio for five dollars or best offer.

George Bernard Shaw once said, "Marriage is popular because it combines the maximum of temptation with the maximum of opportunity."

EVENTFUL CALENDAR

Saturday, May 7

Electrical Engineering Colloquium: The necessity of utilizing the differential analyzer in the design of new, never win, pin ball machines. Walker Basement, 5:00 p.m.

Faculty Pistol Club: Radcliffe Assassination Meeting, Rifle Range, Midnight.

Monday, May 9

Technological Dames, beer brawl and gossip gathering, E. R. Room, 8:00 p.m.

Funnel Club Meeting (Put in \$2000, and get sure return of \$1.50), D. L. Rhine's office, any old time.

Freshman orientation lecture by members of Sophomore Class, whips and stirrup pumps supplied, Barracks, 10:00 p.m.

Combined meeting of Physics and Mathematics Societies: study of live ellipsoidal surfaces by braille system, Boston Common, 3:00 a.m.

Corporation Meeting, talk on simplicity of firing professors, Building 1, 5:00 p.m.

Tuesday, May 10

Civil and Sanitary Engineering Department: Applications of hydraulic engineering to life. Margaret Cheney Room, 4:30 p.m.

Food Technology Colloquium: Methods of synthesizing still more of the common Walker dishes, Building 102, 5:00 p.m.

T.C.A. clothing drive. All types of Men's and Women's clothes needed. Walker Basement at 5:00 p.m. Come and give us your clothes.

Wednesday, May 11

Traitors' Day—Holiday.
